1970 Precision Metal editorial index

DIE CASTING

Plated aluminum die castings: a substitute for plated plastics? ....Jan. p. 89
14TH ANNUAL DIE CASTING DIRECTORY ....Jan. p. 99-130
How to keep your customer happy ....Jan. p. 35
Influence of die castings on automotive styling trends ....Jan. p. 43
More zinc die castings in the 1970 autos ....Jan. p. 44
Die casting: for profit and productivity ....Jan. p. 47
Rare earth metals bring new properties to precision metal parts ....Jan. p. 132
Utilizing precision metal processes in hand tool manufacture ....Feb. p. 42
Selecting, using and maintaining fire resistant hydraulic fluids ....Feb. p. 45
Vibratory finishing retains die casting savings ....Feb. p. 69
The hazards of price reduction ....Feb. p. 31
Double insulation: a battleground for die casting ....Feb. p. 38
Tools and the close tolerances casting processes ....Feb. p. 40
Portable hand and power tools: An $800 million market—and growing fast ....Feb. p. 35
Try finding a common ground ....Mar. p. 33
Cultivating markets in the heating and airconditioning industry ....Mar. p. 63
Little thermostat dial: big service problem ....Mar. p. 67
Compressor components ....Mar. p. 68
New zinc alloy used for prototypes ....Mar. p. 79
Use mass production processes for limited quantities? ....Mar. p. 82
Burner electrode support is die cast ....Mar. p. 134
Unique approach to die cast machine showing ....Mar. p. 135
The customer is always right—usually ....April p. 29
Die Castings in all new Gremlin ....April p. 46
Induction melting in die casting shop ....April p. 58
What do you know about your competitor? ....May p. 29
Imagine it die cast—in magnesium ....May p. 41
An integrated die casting system ....May p. 63
Tough decorative coating for office machine die castings ....May p. 67
Exploring the moldmaker shortage ....May p. 72
Zinc die casting—its vital role ....May p. 102
Those little white lies ....June p. 29
Textile industry has it die cast—in zinc ....June p. 44
Critical parts are die cast in textile machinery ....June p. 48
Questionable castings: scrap or ship? ....July p. 39
Imagine it die cast—in magnesium ....July p. 59
"Styled" auto wheels are aluminum die castings ....July p. 85
How glass bead blasting cleans parts, descales dies ....July p. 89
Is the low bidder really low? ....Aug. p. 31
Die Castings are the key to compact telephones ....Aug. p. 39
Imagine it die cast—in magnesium ....Aug. p. 40
Low-melting-point copper alloy replaces aluminum in die casting ....Aug. p. 54
Batter up ....Sept. p. 21
The state of the industries ....Sept. p. 45
What the trade associations say ....Sept. p. 48
Take a fresh look at die casting with zinc ....Sept. p. 52
Design concepts behind the Vega all-die-cast engine block ....Sept. p. 74
October: the month of metalworking events ....Sept. p. 84
How to agree on color variations ....Oct. p. 37
A hearing conservation program ....Oct. p. 47
Dynamic decade seen for die casting ....Oct. p. 75
Your customer and the selling price ....Nov. p. 41
Robots in the die casting shop ....Nov. p. 59
Unloading die castings with a robot ....Nov. p. 62
Robot learns its job instantaneously ....Nov. p. 63
Robot utilizes hydraulic system on die casting machine ....Nov. p. 64
Programmable transfer ....Nov. p. 65
Point-to-point vs. continuous path transfer ....Nov. p. 66
Casting detector helps robots operate safely ....Nov. p. 67
New wear resistant zinc base die casting alloy ....Nov. p. 68
Precise die cast base keeps videotape recorder parts in alignment ....Nov. p. 70
Die casting brass? ....Nov. p. 72
Design requirements dictate die castings ....Nov. p. 77
Punch card monitor controls die casting machinery ....Nov. p. 116
Quantity of 20 will justify die casting ....Dec. p. 35
Don't ignore the "routine" components ....Dec. p. 37
Reliability for die cast pneumatic components ....Dec. p. 40
Now—leachable cores for die and investment casting ....Dec. p. 43
Fifth ASRI aluminum die casting of the year awards ....Dec. p. 52
Sales engineers or order takers? ....Dec. p. 29

EXTRUSIONS

Beryllium extrusion aids spacecraft development ....Jan. p. 133
Utilizing precision metal processes in hand tool manufacture ....Feb. p. 42
Cultivating markets in the heating and airconditioning industry ....Mar. p. 63
Rooftop giants—on aluminum extrusions ....Mar. p. 64
Use mass production processes for limited quantities? ....Mar. p. 82
Cold forming alloy steels ....April p. 48
Modern electronic gear depends on aluminum extrusions ....May p. 39
Utility and economy with extruded curtainwall ....June p. 62
A diversified market for extruded parts ....July p. 81
The state of the industries ....Sept. p. 45
What the trade associations say ....Sept. p. 48
Piston pins by cold extrusion ....Sept. p. 64
Formability of extrusions is put to work ....Oct. p. 57
Aluminum extrusions reduce truck weight 350 pounds ....Oct. p. 79
High speed flat machining of forgings, castings and extrusions ....Oct. p. 85
Heavy duty hinges are extruded ....Nov. p. 115
Impact extrusion's capabilities ....Dec. p. 36
Stylistic valves from extruded aluminum ....Dec. p. 42

FORGING

A primer on forging and heat treating ....Jan. p. 65
Larger, better die blocks for the forging industry ....Jan. p. 60
Utilizing precision metal processes in hand tool manufacture ....Feb. p. 42
A primer on forging and heat treating ....Feb. p. 75
Selecting, using and maintaining fire resistant hydraulic fluids ....Feb. p. 45
Portable hand and power tools: An $800 Million market—and growing fast ....Feb. p. 35
Efficiency in forge plant layout ....Mar. p. 57
Customers' opinions guide forging industry plans ....Mar. p. 62
Cultivating markets in the heating and airconditioning industry ....Mar. p. 63
Compressor components ....Mar. p. 68
Hydronic assembly clamp is drop forged ....Mar. p. 70
Use mass production processes for limited quantities? ....Mar. p. 82
Huge titanium forging saves 250 pounds per airplane ....Mar. p. 103
A primer on forging and heat treating ....Mar. p. 89
From raw forging to finished product ....Mar. p. 92
Cold forming alloy steels ....April p. 48
Efficiency in gas-fired forge furnaces ....April p. 63
A primer on forging and heat treating ....April p. 69
Recent European developments in forging research May p. 44
Brass forging: design and application criteria ....May p. 59
A primer on forging and heat treating ....May p. 107
Important factors in selection and use of forging equipment ....June p. 54
Important factors in selection and use of forging equipment ....July p. 56
Important factors in selection and use of forging equipment ....Aug. p. 35
Die impression orientation—its relationship to hammer maintenance ....Aug. p. 43
Innovations in open die forging ....Aug. p. 48
The state of the industries ....Sept. p. 45
What the trade associations say ....Sept. p. 48
Important factors in selection and use of forging equipment ....Sept. p. 56
Die impression orientation—its relationship to hammer maintenance ....Sept. p. 60
The modernization of a forge shop ....Oct. p. 51
Forming equipment symposium ....Oct. p. 58
Symposium literature ....Oct. p. 69
High speed flat machining of forgings, castings and extrusions ....Oct. p. 85
The basic principles of layout for forging plants ....Nov. p. 79
Robot learns its job instantaneously ....Nov. p. 63
Programmable transfer ....Nov. p. 65
Point-to-point vs. continuous path transfer ....Nov. p. 66

A diversified market for extruded parts ....July p. 81
The state of the industries ....Sept. p. 45
What the trade associations say ....Sept. p. 48
Piston pins by cold extrusion ....Sept. p. 64
Formability of extrusions is put to work ....Oct. p. 57
Aluminum extrusions reduce truck weight 350 pounds ....Oct. p. 79
High speed flat machining of forgings, castings and extrusions ....Oct. p. 85
Heavy duty hinges are extruded ....Nov. p. 115
Impact extrusion's capabilities ....Dec. p. 36
Stylistic valves from extruded aluminum ....Dec. p. 42

FORGING

A primer on forging and heat treating ....Jan. p. 65
Larger, better die blocks for the forging industry ....Jan. p. 60
Utilizing precision metal processes in hand tool manufacture ....Feb. p. 42
A primer on forging and heat treating ....Feb. p. 75
Selecting, using and maintaining fire resistant hydraulic fluids ....Feb. p. 45
Portable hand and power tools: An $800 Million market—and growing fast ....Feb. p. 35
Efficiency in forge plant layout ....Mar. p. 57
Customers' opinions guide forging industry plans ....Mar. p. 62
Cultivating markets in the heating and airconditioning industry ....Mar. p. 63
Compressor components ....Mar. p. 68
Hydronic assembly clamp is drop forged ....Mar. p. 70
Use mass production processes for limited quantities? ....Mar. p. 82
Huge titanium forging saves 250 pounds per airplane ....Mar. p. 103
A primer on forging and heat treating ....Mar. p. 89
From raw forging to finished product ....Mar. p. 92
Cold forming alloy steels ....April p. 48
Efficiency in gas-fired forge furnaces ....April p. 63
A primer on forging and heat treating ....April p. 69
Recent European developments in forging research May p. 44
Brass forging: design and application criteria ....May p. 59
A primer on forging and heat treating ....May p. 107
Important factors in selection and use of forging equipment ....June p. 54
Important factors in selection and use of forging equipment ....July p. 56
Important factors in selection and use of forging equipment ....Aug. p. 35
Die impression orientation—its relationship to hammer maintenance ....Aug. p. 43
Innovations in open die forging ....Aug. p. 48
The state of the industries ....Sept. p. 45
What the trade associations say ....Sept. p. 48
Important factors in selection and use of forging equipment ....Sept. p. 56
Die impression orientation—its relationship to hammer maintenance ....Sept. p. 60
The modernization of a forge shop ....Oct. p. 51
Forming equipment symposium ....Oct. p. 58
Symposium literature ....Oct. p. 69
High speed flat machining of forgings, castings and extrusions ....Oct. p. 85
The basic principles of layout for forging plants ....Nov. p. 79
Robot learns its job instantaneously ....Nov. p. 63
Programmable transfer ....Nov. p. 65
Point-to-point vs. continuous path transfer ....Nov. p. 66

Casting detector helps robots operate safely ..... Nov. p. 67
Forging eliminates 10% reject rate on hydraulic cylinder heads ..... Dec. p. 38

FINISHING

Plated aluminum die castings: a substitute for plated plastics? ..... Jan. p. 89
Vibratory finishing retains die casting savings ..... Feb. p. 69
A primer on forging and heat treating ..... Mar. p. 89
From raw forging to finished product ..... Mar. p. 92
A primer on forging and heat treating ..... April p. 69
Tough decorative coating for office machine die castings ..... May p. 67
Cut machining costs with high speed broaching ..... June p. 73
How glass bead blasting cleans parts, descales dies ..... July p. 89
Conveyors mechanize batch finishing ..... Aug. p. 47
Adaption cuts cost of gun drilling ..... Sept. p. 73
High speed flat machining of forgings, castings and extrusions ..... Oct. p. 85
Airless spray buffing results in higher profits ..... Nov. p. 103
Chromium bearing conversion coating ..... Dec. p. 47

POWDER METALLURGY

Rare earth metals bring new properties to precision metal parts ..... Jan. p. 132
The advantages of die size metal powders ..... Jan. p. 73
Billions of tiny parts by powder metallurgy ..... Feb. p. 47
One machining step on P/M part ..... Feb. p. 41
Utilizing precision metal processes in hand tool manufacture ..... Feb. p. 42
Cultivating markets in the heating and airconditioning industry ..... Mar. p. 63
Compressor components ..... Mar. p. 68
Aluminized steel strip through powder metallurgy ..... Mar. p. 85
New process for titanium P/M ..... April p. 43
Sintering furnaces: a new breed coming ..... April p. 54
New P/M forming press increases production rate over six times ..... May p. 71
P/M insert solves loosening problem ..... May p. 97
P/M part is multi-function ..... May p. 99
All hydraulic compacting press makes impossible parts ..... June p. 58
Rx for sintering furnace ailments ..... July p. 47
PM Powder Metallurgy Competition:
Domestic Winners ..... July p. 63
Non-U. S. Competition ..... July p. 70
Newest data on hot forged P/M alloys ..... July p. 79
A close look at the P/M industry ..... July p. 92
For difficult configurations: P/M assemblies ..... Aug. p. 50
The state of the industries ..... Sept. p. 45
What the trade associations say ..... Sept. p. 48
Powder metallurgy show literature ..... Sept. p. 77
Optimism permeates powder metal meet ..... Sept. p. 81
Progress in powder metallurgy ..... Oct. p. 80
Ductile P/M steel parts ..... Nov. p. 74

INVESTMENT CASTING

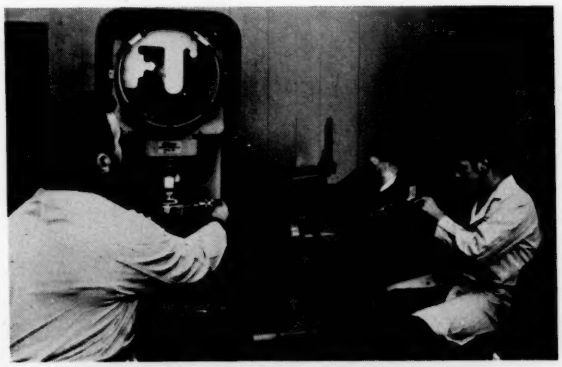
Production of vacuum melted investment castings ..... Jan. p. 52
Tools and the close tolerances casting processes ..... Feb. p. 40
Prototypes or production castings—via rubber molds and wax patterns ..... May p. 49
Cabiran 69 ..... June p. 41
Versatility and savings with investment castings ..... June p. 47
Premium quality investment castings ..... June p. 50
Investment cast turbine compressor rotors ..... July p. 52
The state of the industries ..... Sept. p. 45
What the trade associations say ..... Sept. p 48
Computing production costs for investment castings Oct. p. 96
Slash component costs with a fresh look at investment casting ..... Nov. p. 88
Thin-walled 10,000 psi cylinder by investment casting ..... Dec. p. 39
Now—leachable cores for die and investment casting ..... Dec. p. 43

MISCELLANEOUS

Beer-barrel bungs made on mechanized shell building line ..... Jan. p. 76
Uses of zirconium and hafnium ..... Jan. p. 135
Flameless process heat ..... April p. 60
Aluminum in highway products ..... May p. 54
Hydraulic and pneumatic devices to use more precision metal parts ..... Dec. p. 33

PERMANENT MOLD

Rare earth metals bring new properties to precision metal parts ..... Jan. p. 132



HERE'S ONE SUPPLIER WHO IS ON YOUR SIDE

in your battle for quality control

■ If you're a bug on quality control, General Extrusions is looking for you, and, hopefully, vice versa. General, leading extruder of aluminum components, turned to computerized controls four years ago and has continually updated since. In adjunct, special lab equipment was purchased to check for slightest flaws in dimensions, depth of anodizing, surface blemishes, whatever. Quality control was made a separate departmental function, an area of unavoidable staff responsibility. ■ As long as so many other parts producers are still trying to catch up in this area, you'll be way ahead with General Extrusions. Phone.

GENERAL EXTRUSIONS, INC.

Box 2687, 4040 Lake Park Road, Youngstown, Ohio 44507
Phone 783-0270 (Area Code 216)
Sales Offices in Chattanooga, Chicago, Cleveland, Dallas, Detroit-Grand Rapids, St. Louis, Haddonfield, N.J.

Circle No. **34** *on Reader Service Card*

Introducing an Exceptional Crucible Formulation Specifically for Aluminum Melting and Holding

Now you can get lower melting costs when you use Dixon Carbond® (Silicon Carbide Carbon Bonded) aluminum melting and holding crucibles. A rugged product designed to meet the exacting needs of today's aluminum melting and holding requirements.

Now available from your Dixon representative or distributor.

DIXON
The Joseph Dixon Crucible Company

Crucible and Refractories Division
167 Wayne Street Jersey City New Jersey 07303
